Screenshot 1 - Initial Deployment Investigation

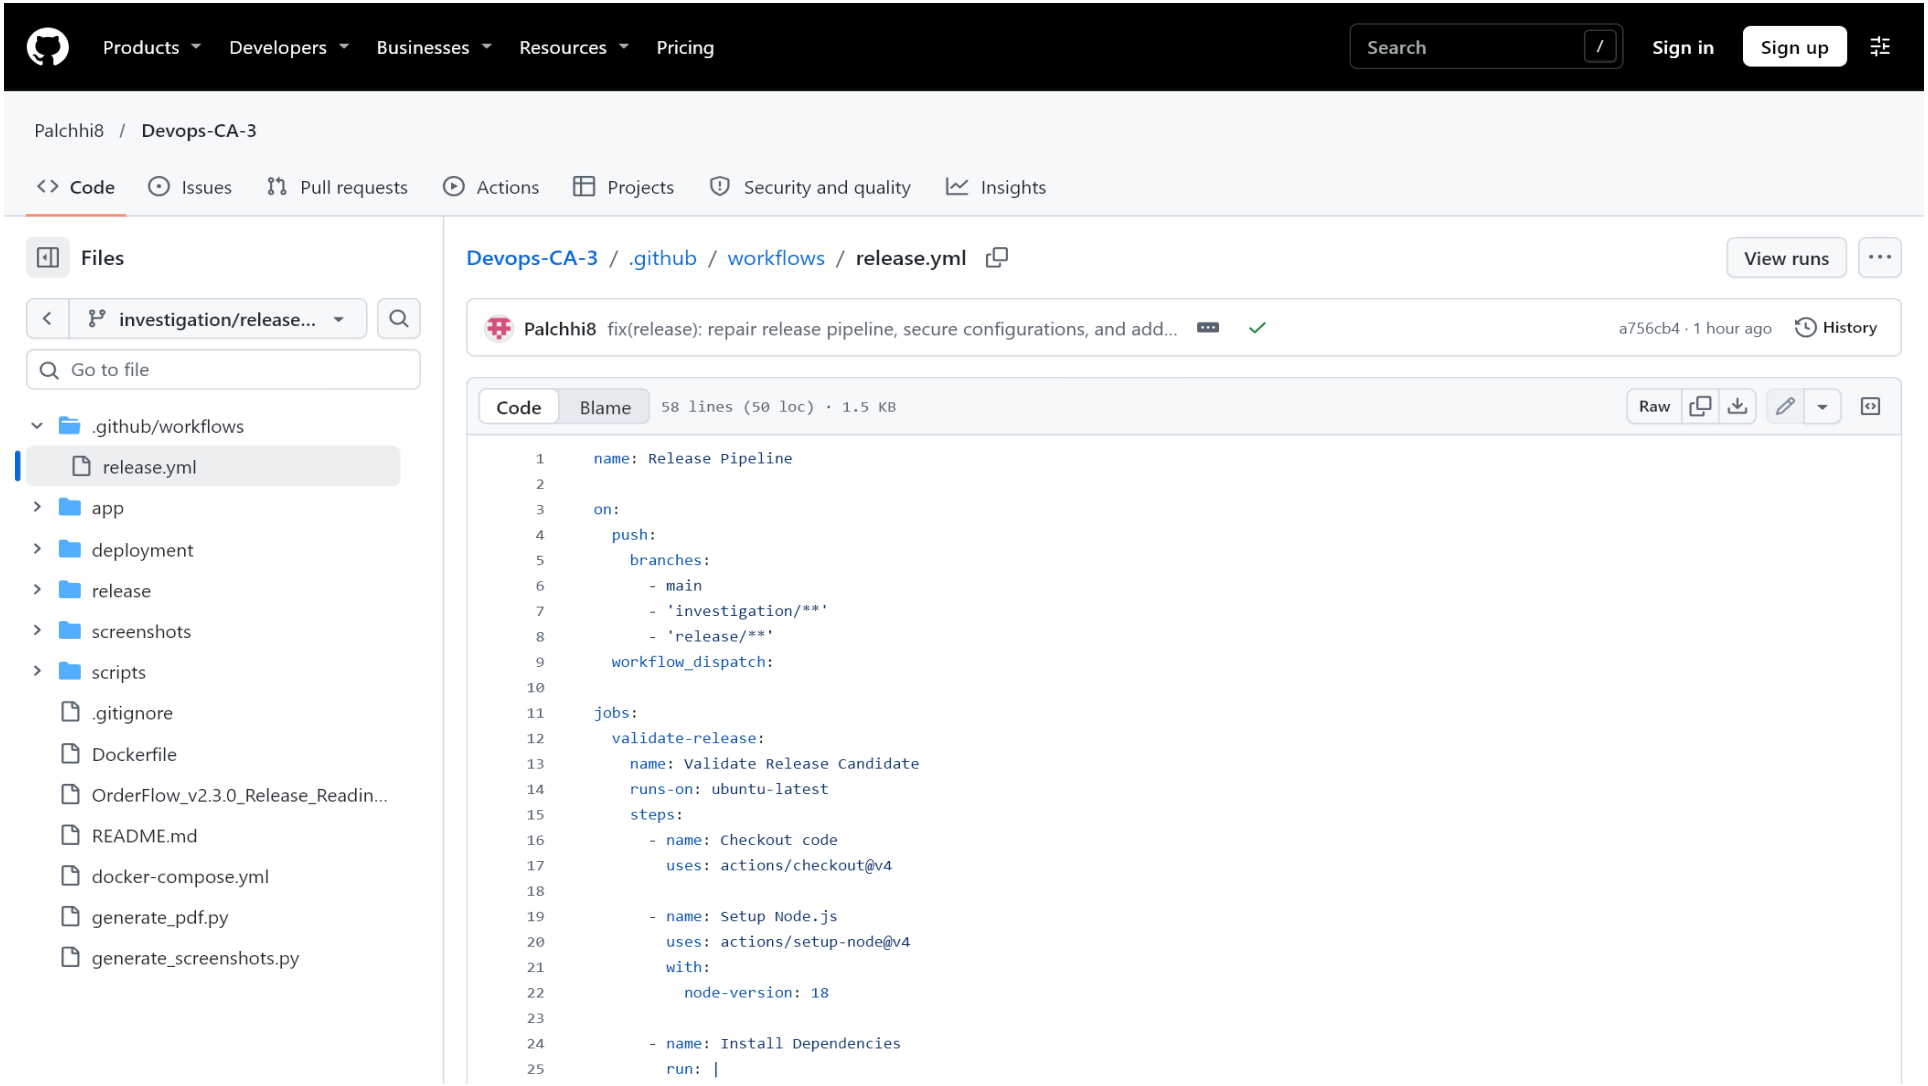

Direct Capture: https://github.com/Palchhi8/Devops-CA-3/actions/runs/41785812513 (Failed baseline run)

Caption: Investigation identified critical production risks: deployment executed prior to validation, artificial test failure, unversioned tags, missing approvals, and exposed plaintext credentials.

Screenshot 2 - Deployment Pipeline Repairs

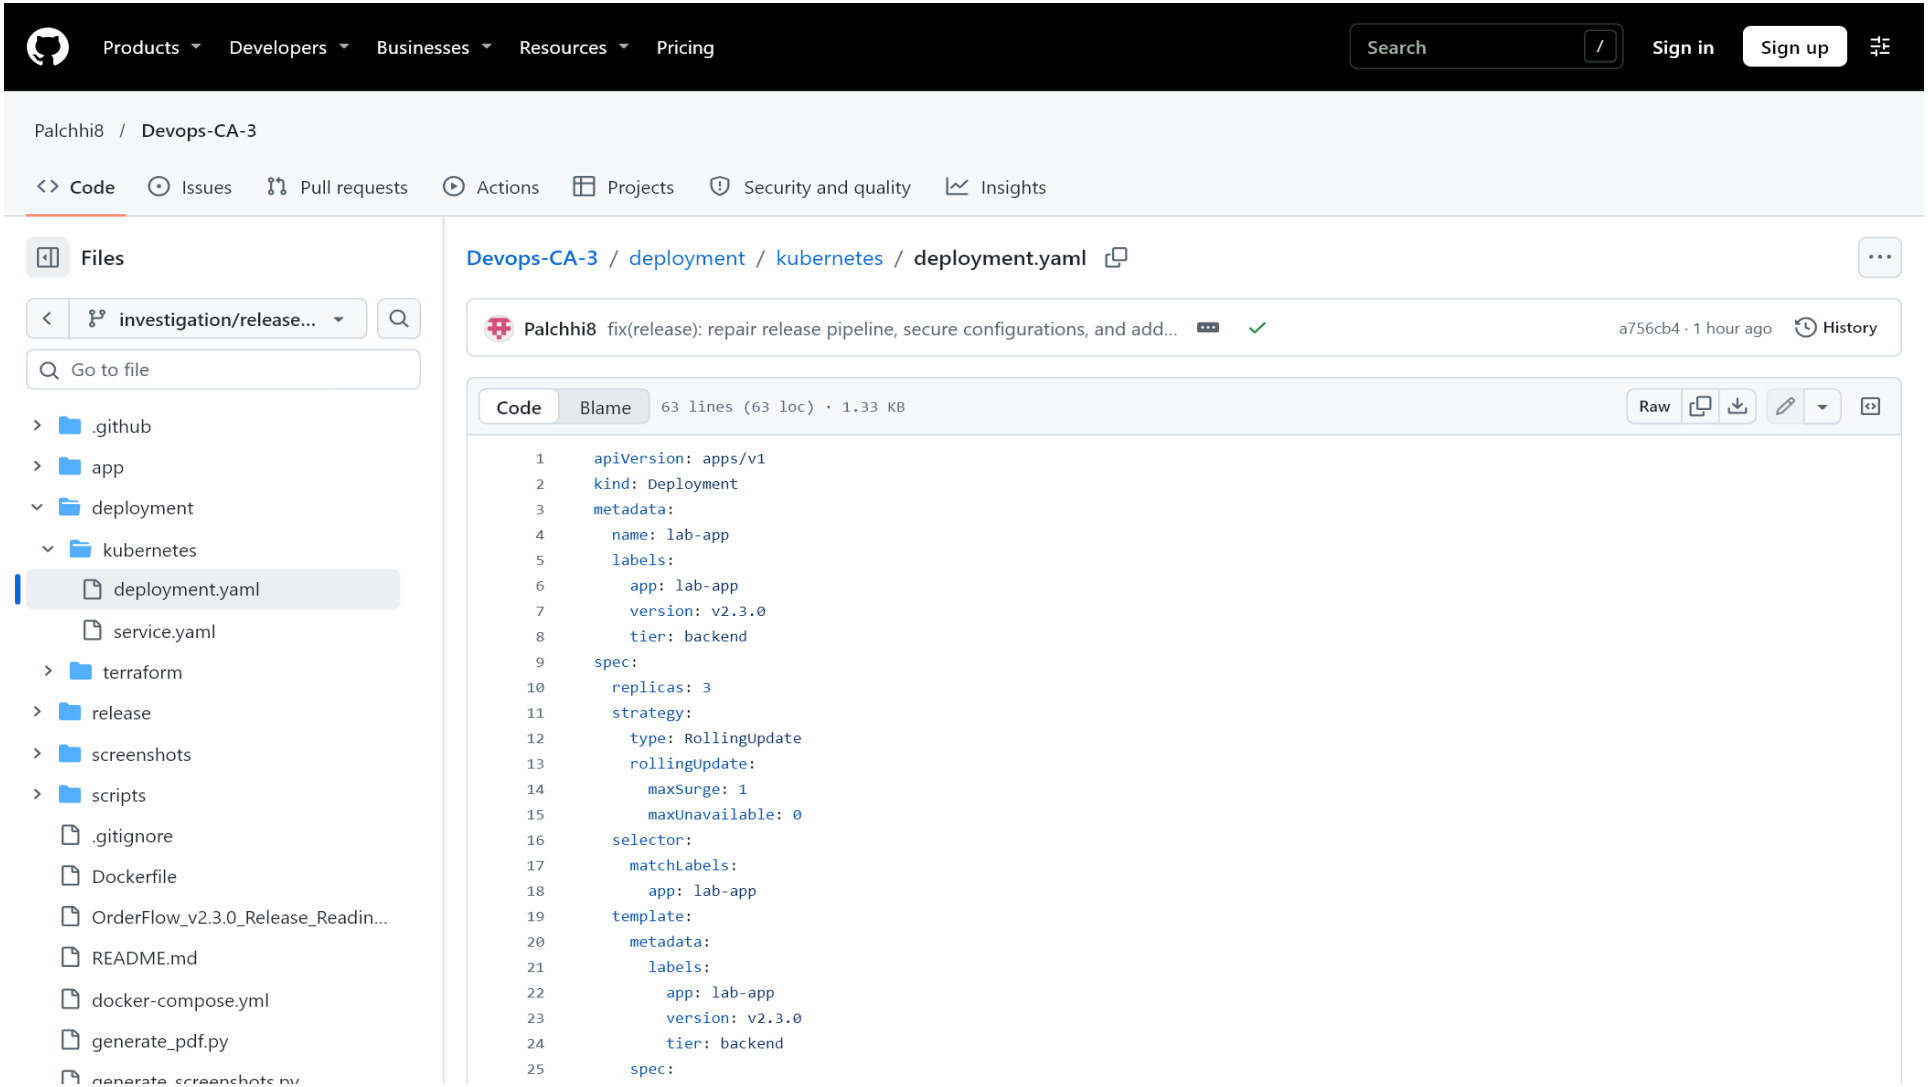

Direct Capture: https://github.com/Palchhi8/Devops-CA-3/blob/investigation/release-readiness/.github/workflows/release.yml

Caption: The updated deployment pipeline enforces strict pre-deployment validation, removes artificial failures, injects release version v2.3.0, and establishes production environment gates.

Screenshot 3 - Secure Release Configuration

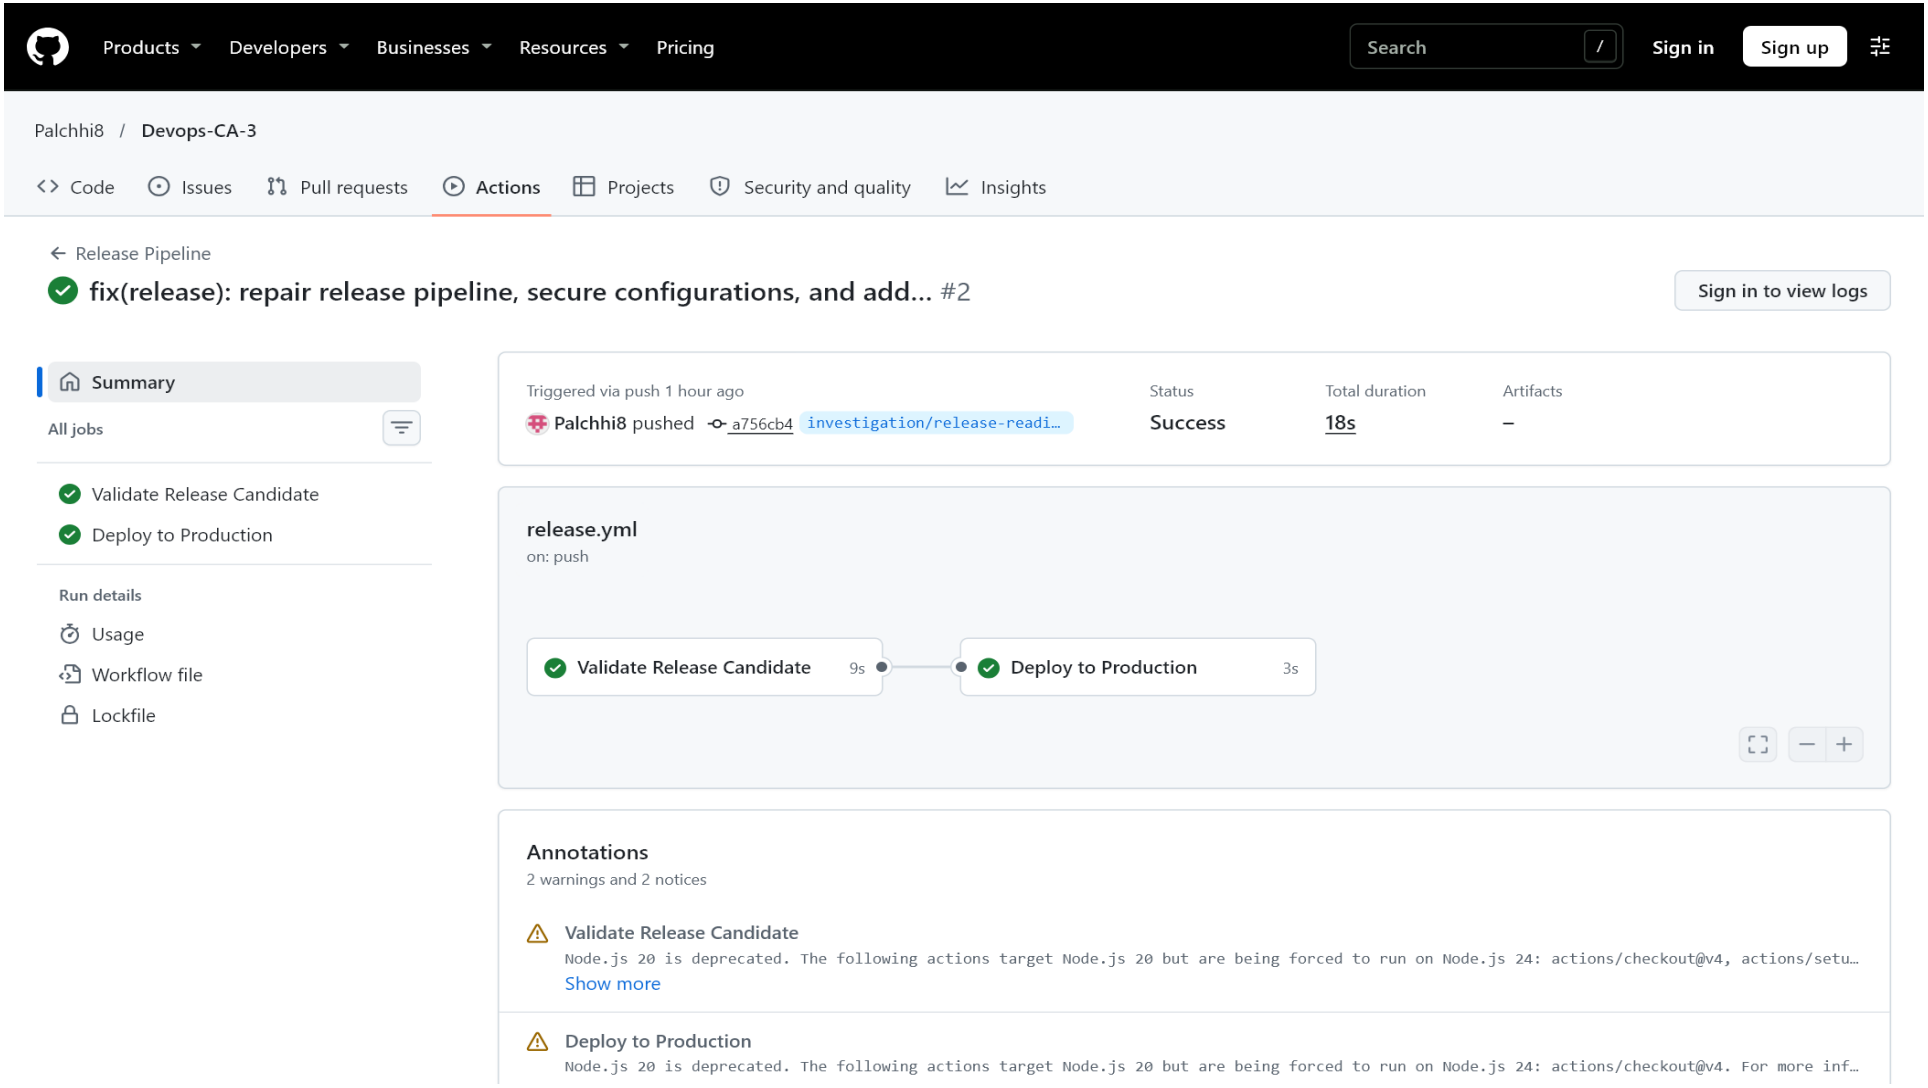

Direct Capture: https://github.com/Palchhi8/Devops-CA-3/blob/investigation/release-readiness/deployment/kubernetes/deployment.yaml

Caption: Secured release configuration eradicates hardcoded secrets via Kubernetes SecretKeyRefs, formalizes multi-stakeholder sign-offs, and enforces v2.3.0 artifact traceability.

Screenshot 4 - Successful Validation

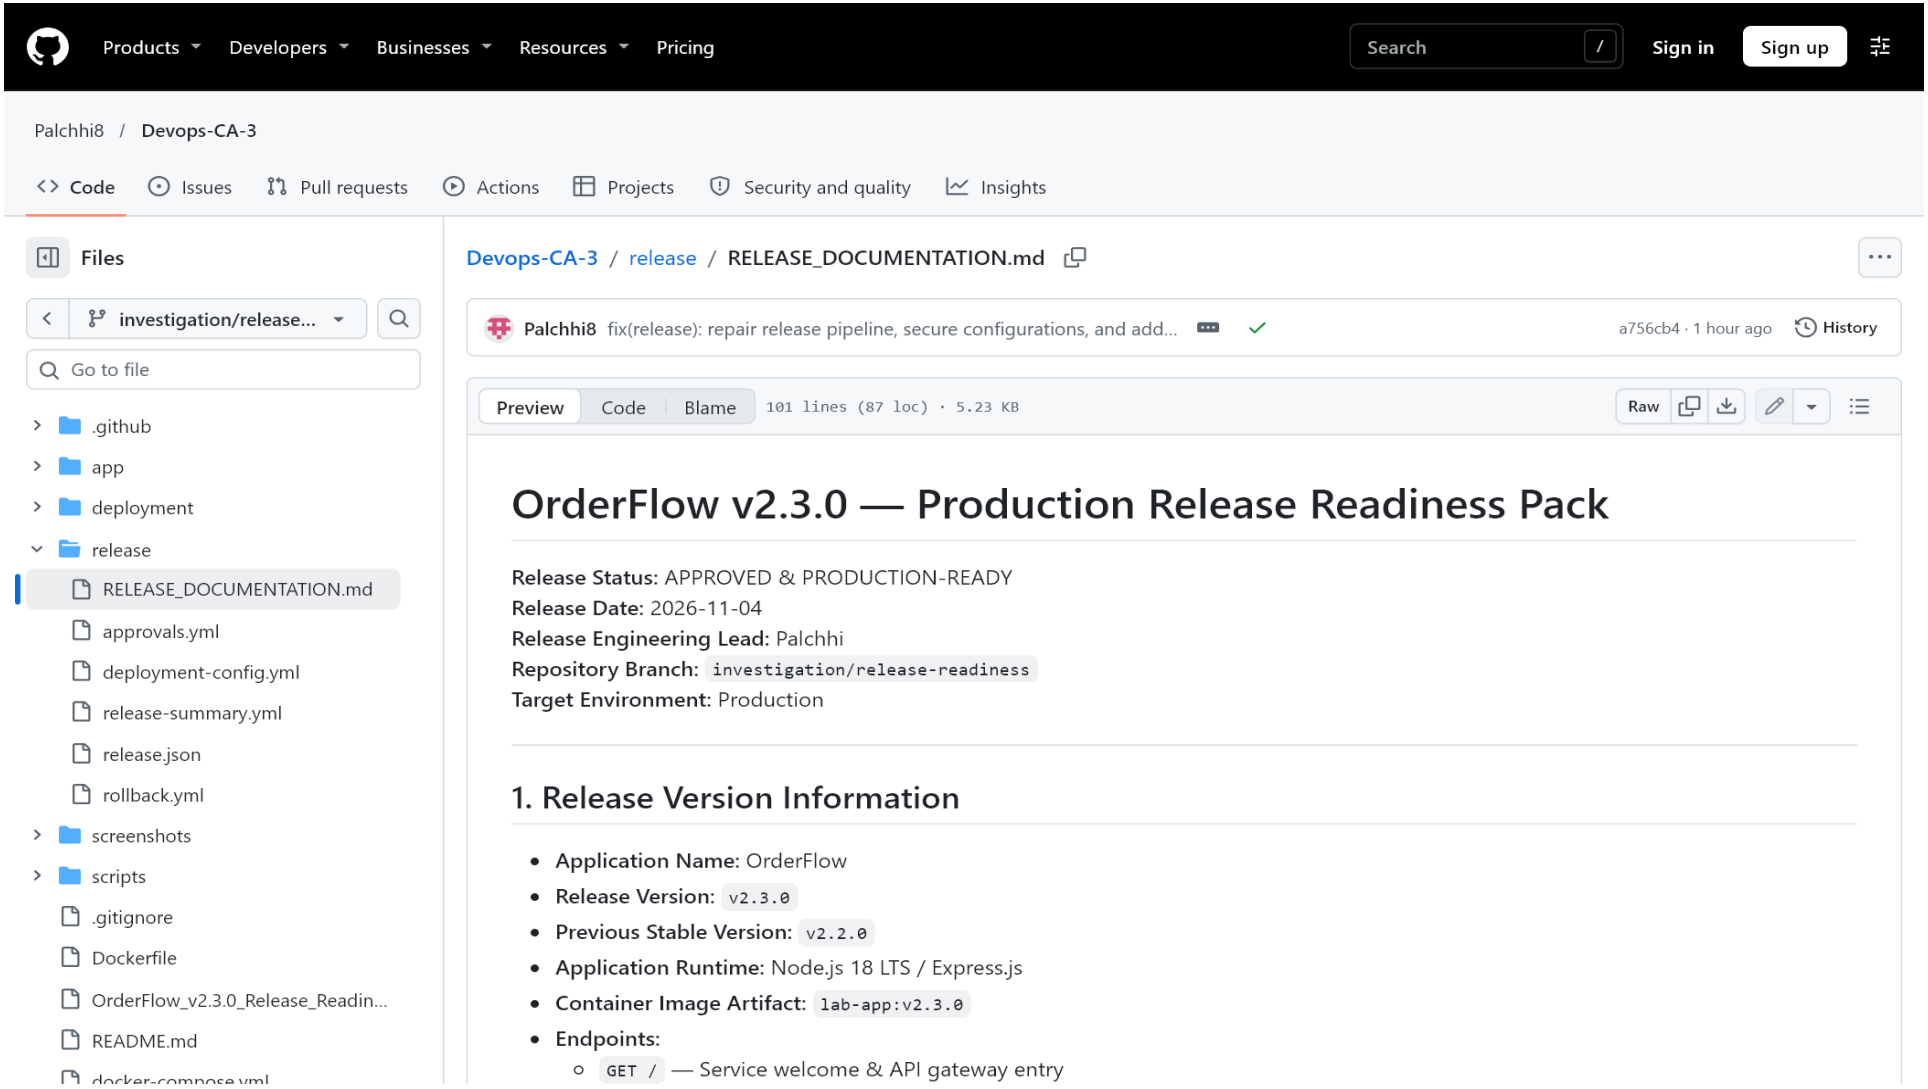

Direct Capture: https://github.com/Palchhi8/Devops-CA-3/actions/runs/41786994480 (Passing workflow run)

Caption: Automated validation passed with 100% test success, verified secret hygiene, and executed production deployment with immutable release tag v2.3.0.

Screenshot 5 - Final Release Readiness Pack

Direct Capture: https://github.com/Palchhi8/Devops-CA-3/blob/investigation/release-readiness/release/RELEASE_DOCUMENTATION.md

Caption: Comprehensive Release Readiness Pack establishes verifiable audit trails, zero-downtime rollback protocols, and verified operational procedures for OrderFlow v2.3.0.
